IN THE SPECIFICATION

Please **replace** the paragraph between line 24 on page 13 and line 7 on page 14 with the following:

To begin processing of image data for the first job (job A), the multifunctional image processing device 11 analyzes the data for the job A to form an image to be printed (Step S31). On completion of forming the printable image, the device 11 locks a paper feeding tray for the job A so that the paper feeding tray may not be pulled out from there~~paper may not be used for other jobs~~(Step S32). Then, the device 11 starts printing process by feeding a paper sheet from the tray designated by the job A (Step S33). While the device 11 periodically checks whether an interrupt takes place (Step S34), it continues the printing job A (Step S35).
